ReadySuite

Changing the way you look at load files.

Viewing, modifying, and validating load files can be a daunting task for even the most accomplished eDiscovery technologist. Whether you need to perform extensive QC on a production, normalise inbound submissions, or simply spot check the work of a colleague or supplier, ReadySuite has you covered!

ReadySuite perfectly blends ease of use with meaningful functionality to deliver an eDiscovery tool unlike anything else available.

View, convert, edit, manipulate and validate. All industry standard load files supported.

Create searchable PDFs. Output searchable text files from image sets.

Validate document volumes and production sets. Find privilege documents before it's too late.

Burn-in document redactions. Validate redaction consistency between image and text.

No advanced setup, servers, or databases required. Simply drag-and-drop files into the application to get started.

Blowback documents with folder and cover sheets. Endorse on-the-fly. Use secondary printer for color.

We bring load files to *life*!

Turning this gibberish ...

... into this instant visual.

ReadySuite
Powered by KLDiscovery Ontrack

# Everything load files.

EDIT VOLUME & PRODUCTION SETS

Remove documents, renumber pages, add endorsements and OCR redacted images within ReadySuite.

EXTENSIVE SCRIPT LIBRARY

Improve the speed and accuracy of common litigation tasks with over 60 provided scripts or create your own with the built-in script ditor.

ROBUST DOCUMENT GRID

Easily supports opening and filtering DAT files at 1GB+ in file size with over millions of records.

INTEGRATED DOCUMENT VIEWER

Gain greater clarity about your data by viewing individual documents directly within ReadySuite.

RELATIVITY INTEGRATION

Load DAT files, metadata and related files directly from ReadySuite for an improved user experience. Import coding from Relativity to assist with QC of productions.
